

## FREE RENEWABLE HEATING SCHEME

Homeowners and tenants that currently run inefficient heating systems could get a fully funded renewable heating system installed through a new scheme. Residents living away from the gas network looking to reduce their heating costs, are being encouraged to consider this scheme.

North Yorkshire County Council has secured funding through the National Grid's £150million Warm Homes Fund to help people living in Ryedale, Scarborough, Hambleton and Richmondshire.

The renewable heating scheme aims to install 200 renewable heating systems in homes across the four authorities. At the heart of the system is an air source heat pump, which typically provides more than three times the heat for each unit of electricity used to power it. This heat is delivered into the home via new radiators and a hot water system. The North Yorkshire Heat Pump Scheme is targeting properties that do not have an existing gas, oil or LPG central heating system and are located away from the gas network.

Householder eligibility criteria will also be taken into consideration as part of the qualification process.

**Communitas Energy (CE)** is managing the scheme on behalf of the councils. To find out more, contact Communitas Energy directly:-
